MacBook

You want portability, performance, and the best value for your buck. That's the **MacBook**! This affordable notebook gives you a large 250GB hard drive and 2.4GB of memory that's expandable up to 4GB. It has all the processing muscle you'll need to handle web browsing, music downloading, and image editing — but you also have the power to record, mix, and edit professional audio sessions! Two USB 2.0 ports make it easy to hook up and run bus-powered gear anywhere. This little dynamo even includes a handy slot-loading SuperDrive. The MacBook gives you longer battery life than ever before — up to 10 hours!

features

MacBook

- Multi-Touch trackpad
- 13" LED screen
- Intel Core 2 Duo processor
- 2 USB 2.0 ports
- 250GB hard drive
- Built-in AirPort Extreme and Bluetooth

ONLY $35/mo.

MacBook Pro Family

MacBook Pro 13"

Who says you have to give up features to take your computer on the road? Apple's **MacBook Pro 13"** packs plenty of horsepower for your projects. Plus, you get a full-size backlit keyboard and a very handy Multi-Touch trackpad, so it's easy to get around on the MacBook Pro 13". It has the USB 2.0 and FireWire 800 ports you need, plus an SD card slot. Built-in AirPort Extreme and Bluetooth make it easy to connect anywhere! A 2.66GHz version is also available.

features

MacBook Pro 13"

- Multi-Touch trackpad
- 13" LED screen
- Intel Core 2 Duo processor
- 2 USB 2.0 ports, 1 FireWire 800 port
- Up to 320GB hard drive
- Built-in AirPort Extreme and Bluetooth
- SD card slot

ONLY $42/mo.

MBP13-24 13", 2.4GHz Core 2 Duo Mac Book Pro **$1199.00**

MBP13-26 13", 2.66GHz Core 2 Duo Mac Book Pro **$1499.00**

MacBook Pro 15"

Desktop power, slimline laptop! Lift the lid on the 2.4GHz **MacBook Pro 15"**, and you're treated to a great view, thanks to the generous 15" LED display and the high-quality graphics. You get USB 2.0 and FireWire 800 connections, plus a handy SD card slot. Onboard AirPort Extreme and Bluetooth keep you connected, while the built-in battery provides up to seven hours of operation on one charge! There are also 2.53GHz and 2.66GHz versions available.

features

MacBook Pro 15"

- Multi-Touch trackpad
- 15" LED screen
- Intel Core i5 or i7 processor
- 2 USB 2.0 ports, 1 FireWire 800 port
- Up to 500GB hard drive
- Built-in AirPort Extreme and Bluetooth
- SD card slot

ONLY $63/mo.

MBP15i5-24 15", 2.4GHz i5 Mac Book Pro **$1799.00**

iMac

Don't be fooled by its humble appearance. Behind its elegant flat-screen display, the Apple **iMac** packs an impressive amount of professional production punch! No tower means no wasted space. You'll love this powerhouse computer's miniscule footprint, especially if you're working in the confines of a home studio environment where desktop real estate is at a premium. And these new iMacs come standard with wireless keyboards and wireless Magic Mice, so there are two fewer cables to clutter your desk. With 21.5" and 27" widescreen displays, you probably won't feel the need for an extra display — but if you do, adding one is as easy as ever. Other new features of the iMac are massive storage (1TB on most models), up to 16GB RAM, and ultra-fast duo- and quad-core processors! Apple even added a built-in SD card reader, a real bonus for anyone with an SD-equipped field recorder or digital camera. Start saving time and space with an amazing iMac today!

Apple iMac Features and Benefits

- Sleek all-in-one design saves space, with no tower under desk
- Intel Core 2 Duo or Core i5 Quad processors
- 21.5" and 27" models available
- Upgradable to 16GB of RAM
- 1TB of storage, standard (most models)
- SuperDrive and SD-slot equipped
- 1 FireWire 800 port and 4 USB 2.0 ports
- The perfect computer for home desktop music production

Mac Pro

Spend less time waiting for files to process and more time working! Whether it has eight or four cores of Intel processors, this high-performance computer features Nehalem processing coupled with a "Turbo Boost" feature that will keep your sessions moving. The 4-core **Mac Pro** supports up to 8GB of RAM, while the top-of-the-line 8-core Mac Pro takes on 32GB, putting top-notch performance at your fingertips. With room for up to 4TB of storage, you can archive your projects and still have room for a killer sample library. Connections abound, with four FireWire 800 ports and five USB 2.0 ports. The Mac Pro has built-in support for dual monitors, so feel free to spread your project out a little. Better yet, you can upgrade to add up to eight displays to truly maximize your workflow.

Apple Mac Pro Features and Benefits

- 4 or 8 cores of Intel processing power
- 4 core upgradable to 8GB of RAM; 8 core to 32GB
- Room for up to 4TB of hard drives
- Super-efficient Nehalem processor
- 3 full-length PCIe slots
- Support for 2 displays, upgradable to support 8
- 18x SuperDrive with dual-layer capabilities
- 4 FireWire 800 ports, 5 USB 2.0 ports
- Turbo Boost dynamic performance technology
- Unmatched native power for audio and video production

Cinema Display

See Everything Clearly with This High-def Display

The Apple **Cinema Display**® gives you the chance to spread your on-screen work layout across a widescreen monitor, so you can see everything at once. There will be no more bouncing from one window to another. Just leave all the windows you need to see open and position them where they're convenient to streamline your workflow. Imagine how cool it would be to see the Edit and Mix windows on your favorite DAW, simultaneously. Both Cinema Displays (available in 30" HD and 24" LED models) are equipped with two USB ports and two FireWire 400 ports, for connecting peripheral devices without occupying the ports on your computer — a very handy feature. The Cinema Displays have extremely narrow bezels, so you can effortlessly use multiple displays together.

ONLY $63/mo.

Cinema30AI	30" Cinema Display, LCD	$1799.00
Cinema24LED	24" Cinema Display, LED	$899.00

Wireless Keyboard

Go Wireless with This Ultra-thin Keyboard

The **Wireless Keyboard** represents Apple's slimmest, most streamlined keyboard yet. Untether yourself and work from your lap, your couch, or wherever best enhances your workflow. Wired versions with or without the numeric keypad are also available.

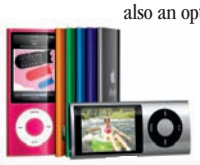
AppleKeyWAI	Wireless Keyboard	$69.00
AppleKeyAI	Keyboard with Numeric Keypad	$49.00
AppleKeyAICom	Keyboard	$49.00

Magic Mouse

Apple's Smart Mouse Just Got Smarter

For years, starting with the iPhone and the iPod touch, Apple has been the pioneer in touch-based technology. Now, the new Apple **Magic Mouse** brings the convenience of gesture controls to the desktop mouse. With two or even three finger swipes, you can navigate effortlessly and control program functions in OS X. The Apple **Mouse** is also an option, if you're looking for a more traditional, scroll-ball-equipped mouse.

MagicMouse	Magic Mouse	$69.00
AppleMouse	Apple Mouse	$49.00



The hot new iPod nano records audio and video!

iPod

Take Your Music Anywhere

The evolution of a sound revolution! Before Apple revolutionized the music world by putting a staggering amount of music in the palm of our hands, we were relegated to listening to the radio or to lugging around bulky CDs. But now, entire CD collections, TV series, and movies are easily transported in a single device that is approximately the size of a deck of cards (and some versions are substantially smaller than that!). The iPod family is loaded with models that fit every need and budget. If widescreen views of your favorite downloaded videos and shows are your thing — along with a super-cool touchscreen — then grab the **iPod touch**, available in 16GB and 32GB sizes. The **iPod classic** retains the look and feel of the first-generation iPods, comes with a 160GB hard drive, and is available in black or silver. The super-slim **iPod nano** comes in a rainbow of colors, with video viewing and 8GB or 16GB hard drives. Cooler yet, the iPod nano now records audio and video! Its onboard FM tuner has two amazing features: iTunes Tagging and Live Pause. Hear a song you like? Just tag it; it'll show up in iTunes the next time you sync.

Time Capsule

Back Up Your System Wirelessly

Music is a creative endeavor, and the rare moments of true inspiration are too precious to risk having them lost forever because of a hard drive crash. Luckily, the smart folks at Apple have a pain-free backup solution that works for both Mac and Windows. Now, you're free to create in your studio, knowing your tracks are safe.

Time Capsule — available in 1TB and 2TB sizes — lets you take full advantage of your Mac's Time Machine backup feature, so you can schedule regular wireless backups of your session data. These huge hard drives also boast built-in wireless technology, so you can easily expand your existing network and share files and printers. What's more, the newest Time Capsules also work simultaneously on two wireless bands, so all of your devices can automatically connect to the most efficient band.

Building a Perfect Box:

PC and Mac Suggestions for a Great Music Workstation

By Dani Teagarden

You've stepped through the digital studio doorway. Now, your computer is your next portal, connecting you to your DAW, your projects, your music. While the machine, the monitor, the keyboard, and the mouse are the apparent stars in that connection, it's worth taking a look at the many peripherals out there with supporting roles. Yes, today's accessories can make your studio tidier and your workflow easier — and, in many cases, they can save your neck. It's time to create a complete computer system that's up to your professional demands. Let's dive in.

Start with the Machine: Beef Up Your Mac or PC

Before you start exploring accessories, make your machine your first mental stop. Is your current Mac or PC cutting it? Are you sailing by the latest software's minimum system requirements, or are you barely treading water? Sometimes, all it takes is a quick upgrade to bring your system up to snuff. We adamantly recommend increasing your system's RAM first. Adhere to the techy adage: "Always upgrade in pairs" — meaning that if you want to add 2GB of RAM to your system, then add two 1GB sticks instead of just one 2GB stick. If you've got one of the very latest Nehalem Xeon-based Mac Pros, however, then make your RAM upgrade a trio, to enjoy the biggest performance boost. Keep in mind that not all RAM sticks are created equal. That's why we carry rock-solid, dependable RAM from Lifetime Memory. Your Sales Engineer can help you get the right RAM configuration for your system.

Apple Mac Pro
For the most Mac muscle, choose the latest Apple Mac Pro!
$3299.00
To Learn More, Go to Page 278.

Okay, next. While we'll discuss hard drive options more in a moment, if your internal drive is edging closer and closer to its max-out point, then you'll want to A) clear some room to an external drive or B) get a bigger drive. Did you know that if you're running your machine with under 10% of hard drive space available, then you're probably taking a huge performance hit? You don't have to worry, though; we carry internal drives for your Mac Pro or PC tower, so you can bolster space on your critical main drive.

All that said, if your computer's processor speed is clocking in under the minimum system requirements, then you'll want to upgrade. In this case, take a look at a powerful new **Mac Pro** or one of our Sweetwater **Creation Station** PCs. We build every one of our Creation Stations in-house, with the latest components and they're designed from the ground up for audio. Count on them to be "Whisper Quiet," because we know how important that is in the studio. More than that, every Creation Station can handle hundreds of tracks, scores of plug-ins, and dozens of virtual instruments. We even test our systems in real-world audio environments and put the results online at sweetwater.com/pc. Four muscular models are available: the home-studio favorite **Creation Station Tower LE**, which starts at $999; the quad-core studio champion **Tower**; the made-for-mobile-recording **Rack**; and the no-compromise powerhouse **Rack XT**. For a turnkey solution, we'll even install all of your software, authorize your iLok, and test your system before we ship it out to you.

Taking the Hard out of Hard Drives

Let's take a turn toward cool gizmos and gadgetry. True, hard drives may not seem like the most exciting topic, but we think that Glyph has a lineup of very slick solutions for the audio professional. No other hard drive maker is so focused on pro audio and pro video needs. Our favorite is the **GT-Key** system. Do you work on projects using multiple machines? Do you share a computer with other studio pros? Wouldn't it be cool if you could transport tons of information without transporting a bunch of cables too? We're setting you up for this one, but if you're leaning or even hinting toward "yes" on any of those counts, then you're going to dig the GT-Key. Basically, your first step is to choose a rackmountable or tabletop chassis to hold your GT-Key drives. There are three available: the 3-bay **GT 103800** (FireWire 800), the 3-bay **103400** (FireWire 400), and the single-bay FireWire **GT051** (FireWire 800). Equip each workstation with a GT-Key chassis, then add your choice of GT-Key drives to match your needs. The drives are totally hot swappable, and each one comes with a protective carrying case, for worry-free to-and-fro transport. We've got GT-Key drives ranging in sizes up to 2TB. They're on page 284.

Keep in mind, you should always have a dedicated drive for recording.

LogicKeyboard Logic 8 Keyboard
Here's the best way to master your DAW's shortcuts!
$134.90
To Learn More, Go to Page 285.

It's also wise to put your sample libraries on yet another drive, so you get the best performance possible. These days, drives should ideally be no slower than 7,200RPM, and it's best to have a drive on its own connector — say, connected to a dedicated USB 2.0 port or FireWire port rather than daisy-chained to your FireWire audio interface. If you've got an extra ExpressCard slot handy, you can add another FireWire port to your system, with the affordable SIIG **FireWire 2-Port ExpressCard/34**. We also carry FireWire PCI card, FireWire PCIe card, and Cardbus FireWire adapter solutions.

And while we're still chatting hard drives, now is a good time to make sure you've got your system reliably backed up. In addition to their GT-Key systems, Glyph has dual and quad desktop drives (with rack ear options) with storage modes to ensure you're always protected. Check out the **GT 050Q 500GB**, for example. Its RAID 1 mode (also known as mirroring) actually writes the same data to two drives at the same time, so your information is secure in the event of a failure. We also carry Apple's **Time Capsule** solutions, available in up to a 2TB size. These are wireless backup solutions for Mac and PC, and if you've got Leopard or higher on your Mac, you can have your system automatically back itself up (wirelessly!). It's very cool. Keep in mind, though, that if you're planning to schedule an auto backup, make sure it's overnight — or some time you know for sure you won't be working on a project. We also recommend turning your wireless card off during critical recording sessions; just this little trick can amount to a measurable performance boost.

Now for the last hard drive point to consider: give yourself a totally mobile option. So far, all of the solutions we've discussed require a power source outside of your computer, so they're not optimized for take-it-and-go situations. While we don't recommend doing important recording on a bus-powered drive, such as the Glyph **PortaGig 320GB** or the **PortaGig 500GB**, we do think that these are great places to store your multimedia collection of music, movies, pictures, and more. In fact, why not bounce out your complete projects as MP3s and have them with you all the time, on a super-slim drive? You never know when you'll want to plug the drive into a random computer to play your latest track for a friend or a potential client. These portable drives are also great for on-the-go editing — on a plane, in a coffeehouse, out in the park… wherever you feel inspired.

Be a Success: Overcome Power Failure

Yes, it could happen to you. You're in the middle of a brilliant take or courageous editing move, and the rain outside is pouring as rapidly as your creativity. You're almost done, then… *zap*. The power's out, so is your luck, and so much for all that time you just wasted. First, let's hope you've got a power conditioner with surge protection — that's definitely a studio essential that'll protect your gear investment from turning into bulky paperweights after just one ill-timed, ill-placed jolt. Check out pages 463–465 for reliable surge protection and power conditioning from Monster and Furman. Two popular options are the Furman **PL-8C** and the new **PL-PRO C** (which even has a USB port for powering your USB gear). And while we're on the topic, make sure you've got a voltage regulator, such as the **AR-20 Series II**. It'll extend the life of your gear and protect you from just-as-dangerous low-voltage brownouts.

Now, back to the worst-nightmare scenario. You can prevent sudden power loss and save yourself hours of lost time, with an affordable backup power supply from APC or Furman. The very popular **APC BR900** is totally compact and offers up to six battery backup outlets. At full power load, it can run for more than five minutes, which is plenty of time to save your session and properly shut down all of your gear. At half load, you've got more than 17 minutes to execute that last stroke of genius, then power down your system. The extended runtime **BR1500** is also available. There's also the Furman **F1000-UPS**. It's a backup power supply, a voltage regulator, a surge suppressor, and a power conditioner, in one — definitely a project-saving piece of gear.

Throw a Peripheral Party

Now for goodies galore. Once you've got the bulk of your system good to go, it's time to add on the time-saving extras that take your workflow from clunky voyage to smooth cruise.

Since you've likely treated your ears, maybe it's time to treat your eyes. Adding a second display can take a lot of window-switching out of your workflow — and if you add up those keystrokes and seconds over time, that's a big deal. We have a couple of great options available: the Apple 30" **Cinema Display** and the 19" widescreen V7 **D19W12**. There's nothing like having one display for your mix window and one display for your edit window, for brilliant, strain-free music production glory.

After your ears and eyes are in good shape, it's time to treat your hands. If you've got a primary DAW, be sure to add a **LogicKeyboard** for it. These Mac/PC keyboards have DAW shortcuts on them, so you can develop a really fast workflow. They're available for Pro Tools, Logic, Cubase/Nuendo, Digital Performer, and Sibelius. Heads up, Mac users: you'll love the new **Advance Line Keyboard** series. The color-coded shortcuts are actually printed onto the slimline Mac Keyboard's keys, giving them a very sleek, very cool look.

If you're a key-stroke maestro and really want to give your hands a vacation, then be sure to check out the Euphonix **MC Transport** and the **MC Control v2**, both for Mac. The MC Transport has a DAW transport control, with a jog wheel and shuttle ring — and we've got a lot of gear with such features, if that's what you're after — but what makes both controllers really awesome is that they allow you to program Mac shortcuts and macro commands. Maybe you frequently do the same series of shortcuts all in a row? Now, you can program it all to just one key and save yourself some keystrokes. The big-boy Euphonix MC Control v2 does a host of other cool stuff for your DAW workflow, with its rotary encoders and motorized faders. But if you're a multi-application power user, you can assign a bunch of different software controls to buttons on its touchscreen, even color code them. It's a very snazzy, very smooth-moving way to maneuver through software.

Enjoy Your Freshly Paved Workflow

Once you've gotten your system optimized for your eyes, ears, and your hands, you're in a good place. Now's the time to sit in the driver's seat and enjoy the smooth system you just gave yourself. If you're like us, you may just find that without the bumps in the road, you're feeling all the more creative.

Euphonix MC Control v2
Control your Mac software or favorite DAW with your hands!

Sweetwater®

sweetwater creation station™

OUR MOST Powerful Family

Since 2004, our Creation Station PCs have set the standard for audio-optimized computers. By building in tested technology, robust and reliable components, and "Whisper Quiet" operation, we've made these audio computers ideal tools for musicians and producers who demand nothing less than the best. Now, we're proud to announce that our new Creation Stations are faster, more powerful, and more affordable than ever! Whether you're recording on your desktop, tracking at an elite studio facility, capturing audio in the field, or using a computer for live performances, Sweetwater's got a Creation Station to fit your needs.

Run hundreds of TRACKS!

- Work with scores of plug-ins
- Use dozens of virtual instruments
- Create a true studio in a box

Our friends at PreSonus depend on their Creation Station Rack to record top acts, including Jars of Clay (pictured) and Tower of Power. Here, their Rack XT is handling 32 tracks of live audio, without breaking a sweat!

Going with Windows 7

All of our new Creation Station PCs ship with operating systems optimized for audio production – tested for and confirmed compatible with all major DAWs and interfaces.

Integrated "Whisper Quiet" Operation

Creation Stations are built by the most knowledgeable computer-audio specialists in the business, and our 10-point Sound Dampening Technologies ensure your computer is the quietest anywhere.

Finely Tuned for Performance

Each Creation Station is tweaked and customized to squeeze every ounce of audio juice from your system. They're compatible with virtually all DAWs, including Pro Tools, Nuendo, and SONAR, as well as with most audio hardware.

SweetCare® Remote — Support Now

Using the same technology NASA uses to program their satellites, we can log into your PC whenever you need help.

World's Best Tech Support

If you do need help, then you can talk to the people who know your PC inside and out. No one supports more systems than Sweetwater.

Amazing Warranty

Your Creation Station is fully warrantied for parts and labor for two full years from the date of purchase. Also, Sweetwater supports all manufacturer warranties (some of which extend beyond two years).

"I used to have nothing but constant worries and trouble with my studio PCs. Then I got smart and bought two Sweetwater Creation Stations (Tower and Rack XT), and now I am no longer weighed down and sidetracked with system issues. It has allowed me to be able to really focus on what's important in my studio — making great records! Thank you for being amazing, Sweetwater!"

— JOSH HACK, VIRTUO SOUND STUDIO, ATLANTA, GA

# of Audio PCs Ever!

Rack XT An HD-ready, plug-in-chomping powerhouse

The flagship of our Creation Station line, the Rack XT packs plenty of power for serious pros, whether in the studio or on the road. Using virtual instruments, heavy-hitting DAWs, or tons of plug-ins? No sweat. The Rack XT is made to handle demanding projects, without a hitch. It features a rackmountable chassis, "Whisper Quiet" operation, a robust processor, two huge hard drives, Pro Tools|HD 2 certification, and much more.

Call your Sales Engineer to find out about more Rack XT options, including a system optimized for Pro Tools|HD 3.

CSTowerLEdc Creation Station Tower LE.....List ~~$1249.00~~ **$999.00**

Why choose Glyph? One reason: peace of mind. Glyph hard drives are built from the ground up to be extremely quiet — perfect for use in audio and video production facilities of any size. Glyph not only sets the standard for drive performance but also offers an astounding 3-year warranty with two years of data-recovery coverage and one year of advance overnight replacement service. We're confident in recommending these drives for your critical projects.

GT 062E Series

Big Storage, High Speed!

Serious projects demand serious storage solutions. Glyph's **GT 062E Series** features dual-drive tabletop units designed for pro audio and video applications. You can operate the GT 062E Series units in Spanning mode, which makes the drives appear as one large volume; in RAID 1 (mirroring) mode, which ensures the safety of your valuable data by writing the same data to both drives at the same time; or in RAID 0 mode, which distributes the I/O burden by reading and writing data from both drives at the same time. The Oxford 936DSE chip gives these drives the speed to manage the demands of software such as Final Cut Pro. The GT 062E Series units sport practical, versatile connection options. The back panels feature two FW800 FireWire ports: one USB 2.0 port and one eSATA port. These units also boast quiet fans and durable metal enclosures, for reliable and quiet use.

			ONLY $18/mo.

ForteRAID

Put a Powerful Storage Solution on Your Desktop!

Glyph puts big-time capacity and speed on your desktop, with the **ForteRAID** drive array! You know how important it is to have a drive system that's super-fast *and* flexible enough to use with different systems. That's why Glyph packed the ForteRAID with the features you need — and they made it desktop friendly, to boot! Inside the elegant aluminum package, you'll find four drives you can depend on for the ultimate in performance and reliability. And Glyph made this box easy to configure and monitor, thanks to its fantastic Glyph Manager 4 software utility. For working with audio or video, the ForteRAID array gives you the power and peace of mind you need. ForteRAID drives are available in 3TB, 2TB, and 1TB sizes. Call for more options.

GT 050Q Series

Super-quiet Desktop Hard Drives

Glyph drives offer exactly what your studio needs in a hard drive: ultra-dependable performance, compact design, and amazingly quiet operation. The quality of the components Glyph uses in its hard drives is second to none, and the company's innovative approach to quiet, efficient operation makes these units well suited to single-room studios as well as big studio rigs. GT 050Q series tabletop drives include durable aluminum enclosures and whisper-quiet fans, for reliable storage and extremely low noise. Available in a range of storage sizes, the GT 050Q series offers up the connectivity to suit nearly any setup, with FireWire 400, FireWire 800, USB 2.0, and eSATA connections. You can choose among the 1TB **GT 050Q 1TB**, the 750GB **GT 050Q 750GB**, the 500GB **GT 050Q 500GB**, and the 250GB **GT 050Q 250GB** Glyph models. Each drive comes with its own hardshell case.

GT Series

Swappable Hard Drive Systems Save You Time and Hassle

Glyph manages to make hard drives cool again, with their totally handy swappable drive systems! If you work in a studio with multiple engineers, or if you work on projects in different places, then you absolutely need a GT system. Just pick between the **GT 103 FireWire 800** 3-bay enclosure and the **GT 051 FireWire 800** 1-bay enclosure. Then, load up on whatever size and number of **GT Key** drives you need!

The bays connect to your computer via FireWire, so you can keep them hooked up all the time. When you're ready to take your project to a different computer, simply pull out your GT Key and put it into another bay — the drives are 100% hot swappable, so you can quickly switch between drives. The 3-bay enclosure comes to you rackmountable. We've also got a rack ears kit, so you can rack up your 1-bay unit. The drives range in size from 160GB to 1TB (that's 1,000GB!). Each GT Key comes with a rugged hardshell case.

			ONLY $18/mo.

PortaGig 50

Pocket-sized Powerhouse of a Drive!

Glyph's **PortaGig 50** is small enough to fit into your pocket, yet it's powerful enough to support high track-count sessions. It's ready for any system, thanks to its FireWire 800, USB 2.0, and eSATA connectivity. You can even access the bus power via FireWire or USB while using the eSATA data connection! Available in 500GB, 320GB, 250GB, and 160GB sizes.

Seagate Barracuda 7200.11

Professional Internal Hard Drives

Seagate's **Barracuda 7200.11** series of SATA hard drives combines proven components with cutting-edge technology. The end result is a line of hard drives that are not only fast but also reliable — exactly what you're looking for in an internal drive. Barracuda 7200.11 drives use perpendicular recording technology that effectively increases capacity and dependability by densely storing your data vertically rather than horizontally. The Barracuda 7200.11 is available in 1TB and 500GB sizes.

			ONLY $10/mo.
SATA1000S	1TB Hard Drive	List $179.00	$124.00

logickeyboard™

Custom DAW and Software Keyboards

"Power users" need the right tools to get the job done right — with a minimum of wasted effort. Become the master of your software, with keyboard shortcuts! Key commands are the "key" to quickly navigating through the most common tasks in your software, but it can be hard to keep them all straight.

LogicKeyboard makes it easy with these color-coded **Custom DAW and Software Keyboards**, as each key is marked with a description of its function. Never again fumble with keyboard shortcuts! With these handy keyboards, you'll know exactly where everything is. Quality keyboards are available for Logic, Pro Tools, and Digital Performer for Mac, as well as for Sibelius and Cubase for both Mac and Windows.
